CHENG CHOU - P'ING HSIANG RAILROAD LINE STUDY

The Cheng Chou - P'ing Hsiang Rail Line Study was made to establish a basis from which future photography may be compared. Such a comparison might be used as an indicator of military intentions and level of economic activity.

In this study a count of all trains observed was recorded, along with the location, type, speed (MPH), direction and number of cars of each freight train. Also a study of the rail yards located in the major cities along the rail line was performed. The capacity of each yard was estimated in terms of freight cars. Freight cars present in the yards are presented as percent of capacity as seen on each mission. Evidence of new construction at yards was checked on each mission and none was found. Each yard was typed either A-classification or B-freight.

A total of 21 missions were used in this study. Only missions covering a minimum of 75 miles of rail line were used for the rail line study.

The results of the railroad line study are presented as mission reports. Each mission will have a coverage map, train table, and maps annotated showing each train and its direction.
